

# LoanInNeed - API Endpoints and Frontend Routes

---

## 1. Backend API Endpoints (Express.js)

### Users (/api/users)

- **POST** /api/users/register - Register new user
  - **Request Body:** { attribution: { partnerId, timestamp, signature }, ...user\_details }
  - **Response Body:** { message: 'Registration completed successfully.', user: { ... } }
- **PUT** /api/users/profile - Update profile
  - **Request Body:** { attribution: { partnerId, timestamp, signature }, ...user\_details }
  - **Response Body:** { message: 'Registration completed successfully.', user: { ... } }
- **POST** /api/users/login - User login
  - **Request Body:** { phone, dob }
  - **Response Body:** { message: 'OTP sent for login. Please verify to continue.', phone }
- **POST** /api/users/admin-login - Admin login
  - **Request Body:** { email, password }
  - **Response Body:** { token, admin: { ... } } (Depends on service implementation)
- **GET** /api/users/me - Get current user profile
  - **Request Body:** None
  - **Response Body:** { message: 'Profile fetched successfully.', user: { ... } }
- **GET** /api/users/profile/complete - Get complete profile
  - **Request Body:** None
  - **Response Body:** { message: 'Complete profile fetched successfully.', profile: { ... } }
- **GET** /api/users/dashboard - Get user dashboard (Alias to /profile/complete)
  - **Request Body:** None
  - **Response Body:** { message: 'Complete profile fetched successfully.', profile: { ... } }
- **POST** /api/users/location - Submit user location
  - **Request Body:** { latitude, longitude, address, ... }

- **Response Body:** { message: 'Location saved successfully', location: { ... } }
- GET /api/users/location - Get user location
  - **Request Body:** None
  - **Response Body:** { location: { ... } } (or 404 with { message: 'No location found' })

## Authentication (/api/auth)

- POST /api/auth/phone/request-otp - Request OTP via phone
  - **Request Body:** { phone }
  - **Response Body:** JSON from Auth Service (e.g. { success: true, message: 'OTP sent' })
- POST /api/auth/phone/verify-otp - Verify OTP via phone
  - **Request Body:** { phone, code }
  - **Response Body:** JSON from Auth Service (e.g. { success: true, token, user })
- POST /api/auth/aadhaar/request-otp - Request Aadhaar OTP
  - **Request Body:** { } (Empty)
  - **Response Body:** { success: true, message: "OTP sent successfully" }
- POST /api/auth/aadhaar/verify-otp - Verify Aadhaar OTP
  - **Request Body:** { otp }
  - **Response Body:** { success: true, message: "Aadhaar verified successfully" }

## KYC (/api/kyc)

- POST /api/kyc/ - Submit KYC details
  - **Request Body:** Complete KYC JSON data
  - **Response Body:** { success: true, message: 'Full KYC details saved successfully ✓', data: { ... } }
- GET /api/kyc/ - Get existing KYC details
  - **Request Body:** None
  - **Response Body:** { message: "KYC details not implemented yet" }
- POST /api/kyc/verify-pan - Verify PAN details
  - **Request Body** (FormData): panNumber (text), panImage (file)
  - **Response Body:** { success: true, message: 'PAN verified successfully (Bypass) ✓', data: { panNumber, isVerified: true } }
- PUT /api/kyc/employment - Update employment info
  - **Request Body:** { employmentType, companyName, companyAddress, monthlyIncome, stability }

- **Response Body:** { success: true, message: 'Employment details updated', data: { ... } }
- **PUT /api/kyc/address** - Update address info
  - **Request Body:** { currentAddress, permanentAddress, city/currentCity, state/currentState, postalCode/pinCode/currentPostalCode, currentAddressType }
  - **Response Body:** { success: true, message: 'Address details updated', data: { ... } }

## Document Verification (/api/document)

- **POST /api/document/submit** - Submit KYC Documents
  - **Request Body** (FormData): salarySlips (up to 5 files), bankStatements (up to 5 files), selfie (1 file)
  - **Response Body:** JSON result array/object containing S3 upload details. Or 500 with { message: 'Document upload failed' }
- **POST /api/document/upload/:type** - Upload a single document by type (e.g., AADHAAR, PAN)
  - **Request Body** (FormData): file
  - **Response Body:** { message: '... uploaded successfully', document: { ... } }
- **GET /api/document/status** - Get document verification status
  - **Request Body:** None
  - **Response Body:** JSON representing the status of document verification

## Selfie (/api/selfie)

- **POST /api/selfie/upload** - Upload selfie for identity verification
  - **Request Body** (FormData): selfie (file)
  - **Response Body:** JSON object with selfie upload results
- **GET /api/selfie/status** - Get selfie upload status
  - **Request Body:** None
  - **Response Body:** JSON status object
